★ SPECIAL SECTION • CONCLUSION

You have travelled the full arc: from the three-layer architecture of Chapter 1 to the practitioner fluency of Chapter 2; from the advanced arsenal of Snowpipe, Time Travel, cloning, RBAC and semi-structured mastery in Chapter 3 to the production composition of Streams, Tasks, UDFs, Stored Procedures, Search Optimization and Snowpark in Chapter 4; and finally to Snowpark ML, Cortex LLM functions, Vector Search RAG, cost governance and SnowPro Core certification prep in Chapter 5. Along the way you built Mango Mart from an empty account into a complete data platform - ingest, transform, secure, accelerate, govern, ML, AI, all inside one governance boundary with SQL as the universal interface.

Now do two things. First, book the SnowPro Core exam - you have earned the credential and sitting the test crystallises the learning.

Second, take the 20-part capstone in Section 5.6 and build it end-to-end on a trial account. Reading a refcard is preparation; shipping a working platform is mastery.

Go build.",
